Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS01.MIX/all11t.map.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

These are declared possibilities. A create/reinforcement action, AI selection, recruitment path or another mechanism must make a live team before its plan runs. Script arguments for encoded building selection remain identified numeric settings; an unproved index-to-target interpretation is not invented. Trigger ledger | Team plans | Campaign guide

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS01.MIX/all12s.map.

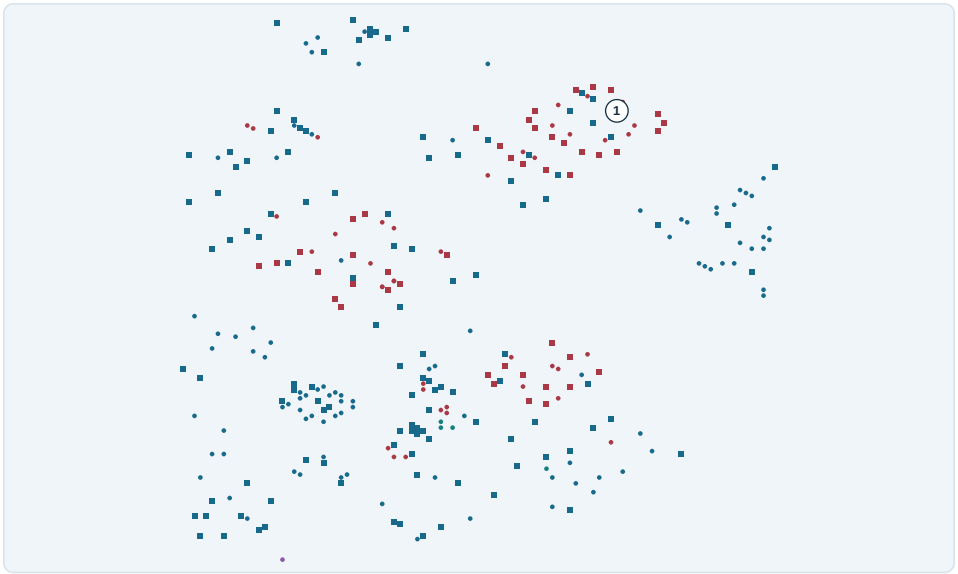
sov01t.map | initial object placements in projected cell coordinates



Owner groups (largest 5)

- Civie1 House (209)
- BadGuy1 House (85)
- BadGuy2 House (4)
- Player House (1)

Squares: structures. Dots: mobile objects. Colors identify owners, not inferred friends or enemies.

Schematic only: terrain, roads, elevation, passability and object footprints are not decoded here.

Initial placement schematic for sov01t.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov01t.map. **Effective extracted member:** MAPS02.MIX/sov01t.map. **Trigger definitions:** 132.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
VICTORY! (0A301C50)	10 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the winner.

Gate	Conditions recorded	Terminal-related actions
Mission Fail (0A115A1C)	4 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the loser.

Trigger ledger | Team plans | Campaign guide

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS02.MIX/sov01t.map.

Initial placement schematic for sov02t.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov02t.map. **Effective extracted member:** MAPS02.MIX/sov02t.map. **Trigger definitions:** 76.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS02.MIX/sov02t.map.

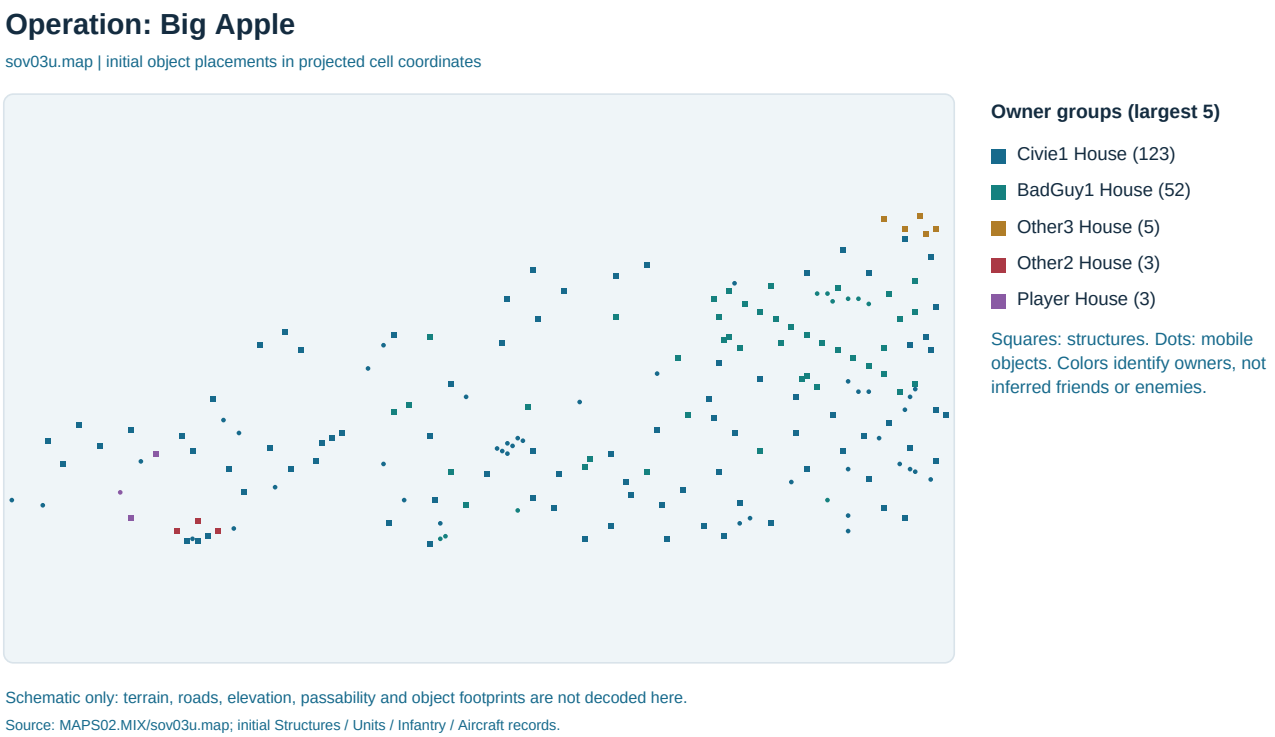
Campaign reading guide | Engine



Initial placement schematic for sov03u.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov03u.map. **Effective extracted member:** MAPS02.MIX/sov03u.map. **Trigger definitions:** 70.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS02.MIX/sov03u.map.

Campaign reading guide | Engine

Initial placement schematic for sov04s.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov04s.map. **Effective extracted member:** MAPS02.MIX/sov04s.map. **Trigger definitions:** 38.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
Win (0A6E825C)	5 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 14 (country/type PLAYER; placed owner Player House) the winner.
Loss (095078B0)	Destroyed, All: owner selector 14 (country/type PLAYER; placed owner Player House).	Declare owner selector 14 (country/type PLAYER; placed owner Player House) the loser.

Every trigger, in file order

Trigger ledger | Team plans | Campaign guide

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS02.MIX/sov04s.map.

1. CAPARS01

Initial placement schematic for sov05u.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov05u.map. **Effective extracted member:** MAPS02.MIX/sov05u.map. **Trigger definitions:** 53.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
Tower Destroyed Backup (0A70764C)	Building does not exist: type index 104 (global list position: Paris Tower (CAPARS01)). A map-local type-list change can affect index interpretation.	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the loser.
Win (0A67AC6C)	10 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the winner.
Player Loses (08AB8D40)	Destroyed, All: owner selector 20 (country/type OTHER3; placed owner Other3 House). Building does not exist: type index 11 (global list position: Soviet Barracks (NAHAND)). A map-local type-list change can affect index interpretation.	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the loser.
Tower Destroyed (0AD6F19C)	Destroyed by anything. See attached-object/cell scope below.	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the loser.

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS02.MIX/sov05u.map.

Map: sov06t.map. **Effective extracted member:** MAPS02.MIX/sov06t.map. **Trigger definitions:** 43.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
PlayerWin2 (0B0B04AC)	9 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the winner.
PlayerLoss (0907B050)	Destroyed, All: owner selector 13 (country/type PLAYER; placed owner Player House).	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the loser.

Trigger ledger | Team plans | Campaign guide

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS02.MIX/sov06t.map.

Initial placement schematic for sov07s.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov07s.map. **Effective extracted member:** MAPS02.MIX/sov07s.map. **Trigger definitions:** 62.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS02.MIX/sov07s.map.

Map: sov08u.map. **Effective extracted member:** MAPS02.MIX/sov08u.map. **Trigger definitions:** 35.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
PlayerLoss (0C2152A0)	Destroyed, All: owner selector 13 (country/type PLAYER; placed owner Player House).	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the loser.
WhiteHouseTaken2 (08012920)	9 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the winner.

Every trigger, in file order

1. PlayerLoss - 0C2152A0

Owner reference: Player. Initially enabled. Difficulty eligibility: Easy 1, Normal 1, Hard 1 (1 means included). Linked trigger: none.

Attached scope: tag definitions 0C214BE0 (persistence 0); no placed object/cell attachment found by this extraction.

Wait for the recorded events:

1. Destroyed, All: owner selector 13 (country/type PLAYER; placed owner Player House).

Then perform these actions in order:

1. Declare owner selector 13 (country/type PLAYER; placed owner Player House) the loser.

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS02.MIX/sov08u.map.

Initial placement schematic for sov09u.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov09u.map. **Effective extracted member:** MAPS02.MIX/sov09u.map. **Trigger definitions:** 55.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Operation: The Fox and the Hound - mission overrides and local definitions

Trigger ledger | Team plans | Campaign guide

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS02.MIX/sov09u.map.

- Player House (5)

Squares: structures. Dots: mobile objects. Colors identify owners, not inferred friends or enemies.

Schematic only: terrain, roads, elevation, passability and object footprints are not decoded here.

Source: MAPS02.MIX/sov10t.map; initial Structures / Units / Infantry / Aircraft records.

Initial placement schematic for sov10t.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov10t.map. **Effective extracted member:** MAPS02.MIX/sov10t.map. **Trigger definitions:** 59.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
Winner (09AB6CC0)	5 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the winner.
Loser (09AB6F60)	3 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the loser.

Every trigger, in file order

1. West Trans Arrives - 07FACF60

Owner reference: Player. Initially enabled. Difficulty eligibility: Easy 1, Normal 1, Hard 1 (1 means included). Linked trigger: none.

Attached scope: tag definitions 07FAFB50 (persistence 0); no placed object/cell attachment found by this extraction.

Wait for the recorded events:

1. 0 configured time units have elapsed since scenario start.

Then perform these actions in order:

1. Supply reinforcement team West Trans (0AF67A4C).

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS02.MIX/sov10t.map.

Map: sov11s.map. **Effective extracted member:** MAPS02.MIX/sov11s.map. **Trigger definitions:** 46.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

These are declared possibilities. A create/reinforcement action, AI selection, recruitment path or another mechanism must make a live team before its plan runs. Script arguments for encoded building selection remain identified numeric settings; an unproved index-to-target interpretation is not invented. Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS02.MIX/sov11s.map.

Initial placement schematic for sov12s.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov12s.map. **Effective extracted member:** MAPS02.MIX/sov12s.map. **Trigger definitions:** 54.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
Win (0CDA750C)	7 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the winner.
Lose Condition (0AC7BD50)	Destroyed, All: owner selector 13 (country/type PLAYER; placed owner Player House).	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the loser.

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS02.MIX/sov12s.map.

Map: all01umd.map. **Effective extracted member:** mapsmd03.mix/all01umd.map. **Trigger definitions:** 334.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: mapsmd03.mix/all01umd.map.

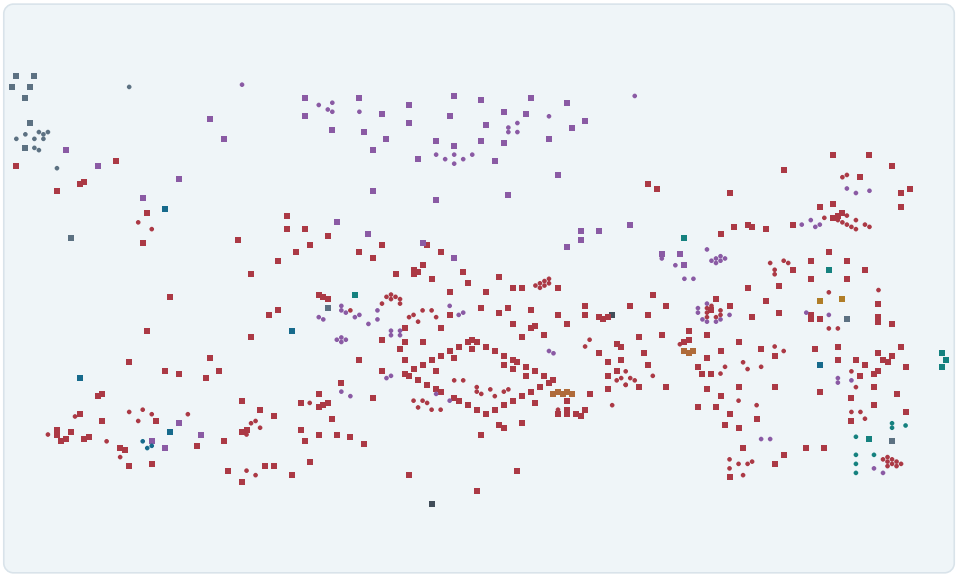
all02umd.map | initial object placements in projected cell coordinates



Owner groups (largest 5)

- Neutral (401)
- YuriCountry (127)
- Yuri2 (22)
- Nod (10)
- Russians (8)

Squares: structures. Dots: mobile objects. Colors identify owners, not inferred friends or enemies.

Schematic only: terrain, roads, elevation, passability and object footprints are not decoded here.

Source: expandmd01.mix/all02umd.map; initial Structures / Units / Infantry / Aircraft records.

Initial placement schematic for all02umd.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: all02umd.map. **Effective extracted member:** expandmd01.mix/all02umd.map. **Trigger definitions:** 253.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
Mission_Over (0CDDC22C)	10 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 0 (country/type AMERICANS; placed owner Americans) the winner.
PlayerLose (0460D72C)	Destroyed, All: owner selector 0 (country/type AMERICANS; placed owner Americans). 5 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 0 (country/type AMERICANS; placed owner Americans) the loser.

Every trigger, in file order

1. Make_Cowboy - 0916B4CC

Owner reference: Americans. Initially enabled. Difficulty eligibility: Easy 1, Normal 1, Hard 1 (1 means included). Linked trigger: none.

Attached scope: tag definitions 0916B2AC (persistence 0); no placed object/cell attachment found by this extraction.

Wait for the recorded events:

1. 0 configured time units have elapsed since the trigger timer was initialized/reset.

Then perform these actions in order:

Trigger ledger | Team plans | Campaign guide

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: expandmd01.mix/all02umd.map.

Initial placement schematic for all03umd.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: all03umd.map. **Effective extracted member:** mapsmd03.mix/all03umd.map. **Trigger definitions:** 376.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
WeWin (0C61D87C)	10 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 0 (country/type AMERICANS; placed owner Americans) the winner.
PlayerLose (0BE20ACC)	Destroyed, All: owner selector 0 (country/type AMERICANS; placed owner Americans). 1 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 0 (country/type AMERICANS; placed owner Americans) the loser.

Every trigger, in file order

1. Set_WC_Time - 0AFFC4FC

Owner reference: Americans. Initially enabled. Difficulty eligibility: Easy 1, Normal 1, Hard 1 (1 means included). Linked trigger: none.

Attached scope: tag definitions 0AFF8E7C (persistence 0); no placed object/cell attachment found by this extraction.

Wait for the recorded events:

1. 1 configured time units have elapsed since the trigger timer was initialized/reset.

Then perform these actions in order:

1. Set Superweapon Charge; main setting 2; location/duration field 95.
2. Enable and reset applicable timers for Player_Power_Back (0973308C).

Source locator: mapsmd03.mix/all03umd.map; Triggers line 13930, Events line 14308, Actions line 14686.

2. Player_Power_Back - 0973308C

Owner reference: Americans. Initially disabled. Difficulty eligibility: Easy 1, Normal 1, Hard 1 (1 means included). Linked trigger: none.

Incoming activation links: enable from Set_WC_Time (0AFFC4FC); enable from Player_Power_Low (09704DDC).

Attached scope: tag definitions 0973520C (persistence 0); no placed object/cell attachment found by this extraction.

Wait for the recorded events:

1. At least 1 instances of Weather Controller (GAWEAT) exist on the map, under this event's ownership scope.
2. local flag 57 (Player_Power_Down) is set.
3. Power Full: owner selector 0 (country/type AMERICANS; placed owner Americans).

Flag writers in this mission: clear local flag 57 (Player_Power_Down) at Player_Power_Back (0973308C); set local flag 57 (Player_Power_Down) at Player_Power_Low (09704DDC). Script steps can also change flags; see teams below.

Then perform these actions in order:

1. Play voice notification Mis_xA3_EvaWeatherOnline.
2. Clear local flag 57 (Player_Power_Down).
