Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: mapsmd03.mix/all03umd.map.

all04dmd.map | initial object placements in projected cell coordinates

Owner groups (largest 5)

- YuriCountry (63)
- Neutral (39)
- Arabs (24)
- Americans (11)
- French (9)

Squares: structures. Dots: mobile objects. Colors identify owners, not inferred friends or enemies.

Notable type references

1. YAPPET

Schematic only: terrain, roads, elevation, passability and object footprints are not decoded here.

Source: mapsmd03.mix/all04dmd.map; initial Structures / Units / Infantry / Aircraft records.

Initial placement schematic for all04dmd.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: all04dmd.map. **Effective extracted member:** mapsmd03.mix/all04dmd.map. **Trigger definitions:** 142.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
It's Over! 2 (0682668C)	2 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 0 (country/type AMERICANS; placed owner Americans) the winner.
We Won! (0A2F818C)	15 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 0 (country/type AMERICANS; placed owner Americans) the winner.
It's Over : ((09F7C5BC)	Destroyed, All: owner selector 0 (country/type AMERICANS; placed owner Americans).	Announce defeat.

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: mapsmd03.mix/all04dmd.map.

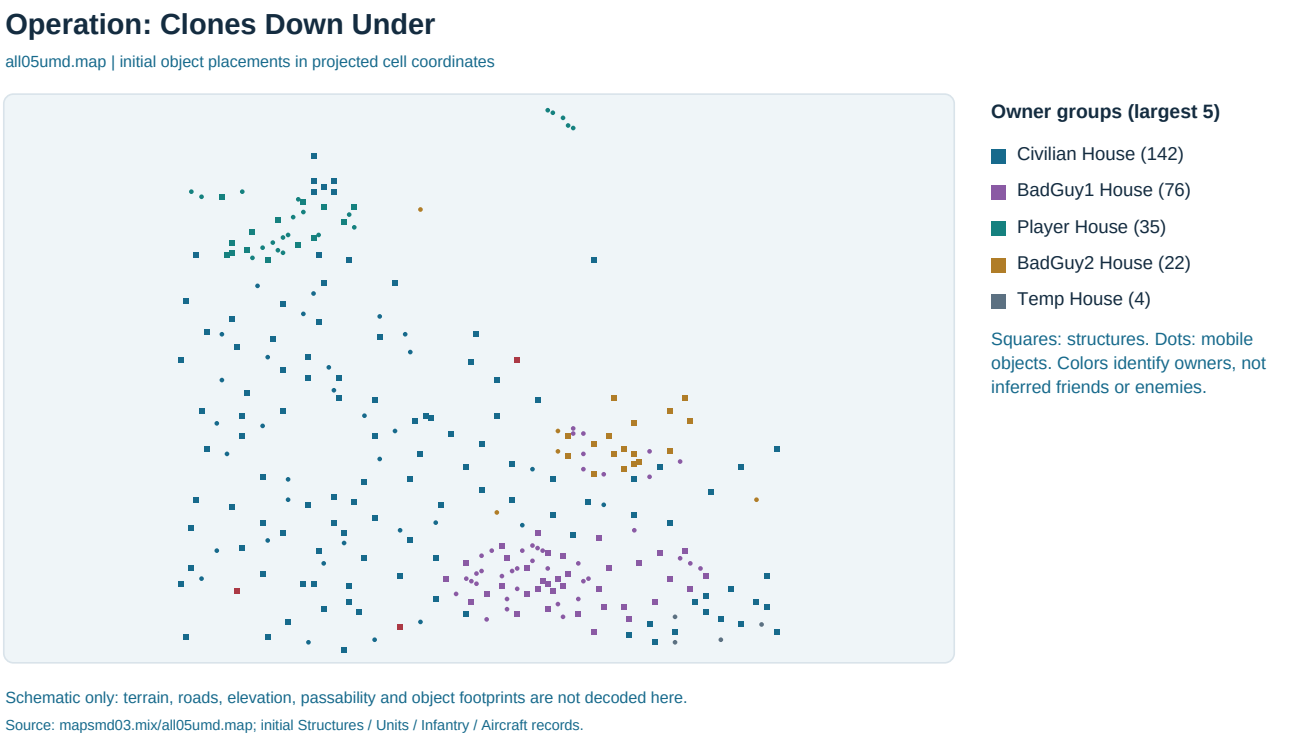
Campaign reading guide | Engine



Initial placement schematic for all05umd.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: all05umd.map. **Effective extracted member:** mapsmd03.mix/all05umd.map. **Trigger definitions:** 108.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: mapsmd03.mix/all05umd.map.

Initial placement schematic for all06umd.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: all06umd.map. **Effective extracted member:** mapsmd03.mix/all06umd.map. **Trigger definitions:** 75.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
Player Loses (0BD7FB3C)	2 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 0 (country/type AMERICANS; placed owner Americans) the loser.
Player Wins (0BD7E82C)	5 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 0 (country/type AMERICANS; placed owner Americans) the winner.

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: mapsmd03.mix/all06umd.map.

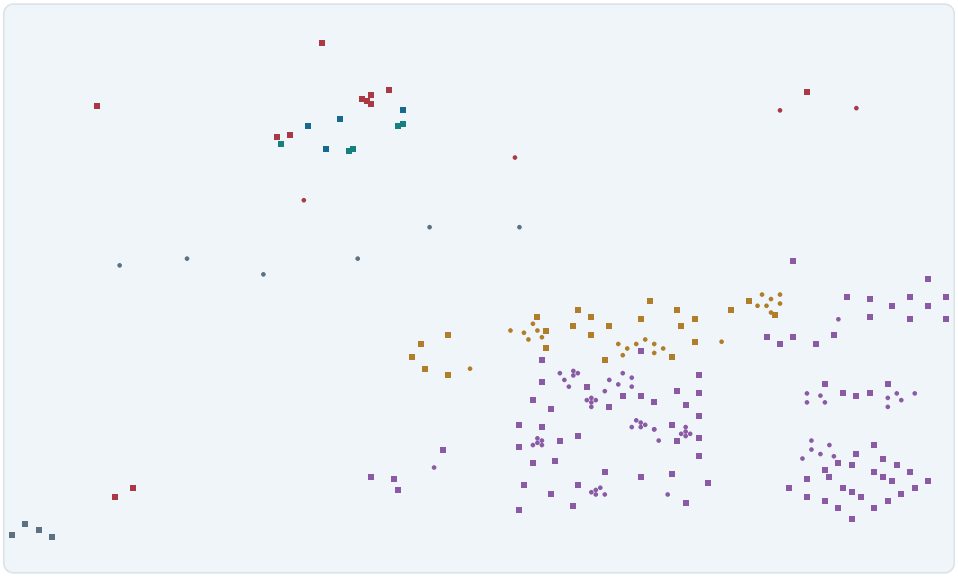
all07smd.map | initial object placements in projected cell coordinates



Owner groups (largest 5)

- YuriCountry (145)
- Yuri2 (47)
- Neutral (16)
- Yuri3 (10)
- Russians (5)

Squares: structures. Dots: mobile objects. Colors identify owners, not inferred friends or enemies.

Schematic only: terrain, roads, elevation, passability and object footprints are not decoded here.

Source: mapsmd03.mix/all07smd.map; initial Structures / Units / Infantry / Aircraft records.

Initial placement schematic for all07smd.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: all07smd.map. **Effective extracted member:** mapsmd03.mix/all07smd.map. **Trigger definitions:** 88.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
PlayerLose (08ED7A3C)	Destroyed, All: owner selector 0 (country/type AMERICANS; placed owner Americans). 3 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 0 (country/type AMERICANS; placed owner Americans) the loser.
PlayerWin (06B9B43C)	10 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 0 (country/type AMERICANS; placed owner Americans) the winner.

Gate	Conditions recorded	Terminal-related actions
Announce_Tierra_Lose (0A57B28C)	5 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 0 (country/type AMERICANS; placed owner Americans) the loser.

Operation: Brain Dead - mission overrides and local definitions

Trigger ledger | Team plans | Campaign guide

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: mapsmd03.mix/all07smd.map.

Operation: Time Shift

Campaign reading guide | Engine

Yuri Soviet opening: Time Shift. Naval forces and the defended shore show why target domains and arrival scripts matter. Historical local Android-emulator campaign-start capture.

Initial placement schematic for sov01umd.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov01umd.map. **Effective extracted member:** mapsmd03.mix/sov01umd.map. **Trigger definitions:** 302.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
_End_Lose (06B602BC)	15 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 8 (country/type RUSSIANS; placed owner Russians) the loser.
_End_Win (06B600EC)	5 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 8 (country/type RUSSIANS; placed owner Russians) the winner.

Every trigger, in file order

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: mapsmd03.mix/sov01umd.map.

Initial placement schematic for sov02smd.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov02smd.map. **Effective extracted member:** mapsmd03.mix/sov02smd.map. **Trigger definitions:** 86.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: mapsmd03.mix/sov02smd.map.

Map: sov03umd.map. **Effective extracted member:** mapsmd03.mix/sov03umd.map. **Trigger definitions:** 139.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
Player Wins (0BF382DC)	3 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 22 (country/type SOVIETSCOUNTRY; placed owner Soviets) the winner.
Player Loses (0BEC10EC)	Destroyed, Buildings, All: owner selector 22 (country/type SOVIETSCOUNTRY; placed owner Soviets). Destroyed, Units, All: owner selector 22 (country/type SOVIETSCOUNTRY; placed owner Soviets).	Declare owner selector 22 (country/type SOVIETSCOUNTRY; placed owner Soviets) the loser.

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: mapsmd03.mix/sov03umd.map.

sov04dmd.map | initial object placements in projected cell coordinates

Owner groups (largest 5)

- YuriCountry (101)
- Neutral (50)
- Alliance (19)
- Russians (9)
- Arabs (6)

Squares: structures. Dots: mobile objects. Colors identify owners, not inferred friends or enemies.

Schematic only: terrain, roads, elevation, passability and object footprints are not decoded here.

Source: mapsmd03.mix/sov04dmd.map; initial Structures / Units / Infantry / Aircraft records.

Initial placement schematic for sov04dmd.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov04dmd.map. **Effective extracted member:** mapsmd03.mix/sov04dmd.map. **Trigger definitions:** 132.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
Romanov Flies Away 2 (0CA0ABDC)	local flag 29 (Landed) is set.	Declare owner selector 8 (country/type RUSSIANS; placed owner Russians) the winner.
Congrats! (0CA09E0C)	17 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 8 (country/type RUSSIANS; placed owner Russians) the winner.

Gate	Conditions recorded	Terminal-related actions
It's Over : ((0921D45C)	Destroyed, All: owner selector 3 (country/type GERMANS; placed owner Germans). Destroyed, All: owner selector 8 (country/type RUSSIANS; placed owner Russians).	Declare owner selector 8 (country/type RUSSIANS; placed owner Russians) the loser.
Romanov Killed (043915FC)	No instances of Premier Romanov (RMNV) exist on the map, under this event's ownership scope.	Declare owner selector 8 (country/type RUSSIANS; placed owner Russians) the loser.
Dumb Player (097304AC)	Destroyed by anything. See attached-object/cell scope below.	Declare owner selector 8 (country/type RUSSIANS; placed owner Russians) the loser.

Every trigger, in file order

1. It's Over! - 0921DEDC

Trigger ledger | Team plans | Campaign guide

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: mapsmd03.mix/sov04dmd.map.

Initial placement schematic for sov05umd.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov05umd.map. **Effective extracted member:** mapsmd03.mix/sov05umd.map. **Trigger definitions:** 115.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
_Loser (09442BBC)	Destroyed, All: owner selector 8 (country/type RUSSIANS; placed owner Russians).	Declare owner selector 8 (country/type RUSSIANS; placed owner Russians) the loser.
_Winner (094429EC)	35 configured time units have elapsed since the trigger timer was initialized/reset.	Declare owner selector 8 (country/type RUSSIANS; placed owner Russians) the winner.

These are declared possibilities. A create/reinforcement action, AI selection, recruitment path or another mechanism must make a live team before its plan runs. Script arguments for encoded building selection remain identified numeric settings; an unproved index-to-target interpretation is not invented. Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: mapsmd03.mix/sov05umd.map.

Notable type references

1. YACOMD

Initial placement schematic for sov06lmd.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov06lmd.map. **Effective extracted member:** mapsmd03.mix/sov06lmd.map. **Trigger definitions:** 81.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Trigger ledger | Team plans | Campaign guide

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: mapsmd03.mix/sov06lmd.map.

Initial placement schematic for sov07tmd.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov07tmd.map. **Effective extracted member:** mapsmd03.mix/sov07tmd.map. **Trigger definitions:** 126.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: mapsmd03.mix/sov07tmd.map.

Initial placement schematic for trn01t.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: trn01t.map. **Effective extracted member:** MAPS01.MIX/trn01t.map. **Trigger definitions:** 72.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

These are declared possibilities. A create/reinforcement action, AI selection, recruitment path or another mechanism must make a live team before its plan runs. Script arguments for encoded building selection remain identified numeric settings; an unproved index-to-target interpretation is not invented. Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS01.MIX/trn01t.map.

Initial placement schematic for trn02t.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: trn02t.map. **Effective extracted member:** MAPS01.MIX/trn02t.map. **Trigger definitions:** 45.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

Terminal gates: victory, defeat or forced end

These records can issue an outcome or its announcement. An announcement is distinguished from the actual winner/loser action. Follow the linked trigger for all guards and action order.

Gate	Conditions recorded	Terminal-related actions
PlayerLose (09E02EA0)	Destroyed, All: owner selector 13 (country/type PLAYER; placed owner Player House).	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the loser.
PlayerWin (09E02BF0)	Destroyed, Buildings, All: owner selector 14 (country/type REDTEAM; placed owner RedTeam House).	Declare owner selector 13 (country/type PLAYER; placed owner Player House) the winner.

Boot Camp - Day 2 - mission overrides and local definitions

Trigger ledger | Team plans | Campaign guide

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS01.MIX/trn02t.map.

Initial placement schematic for sov09t.map. Explanatory diagram derived from the guide and local data; not a screenshot.

Map: sov09t.map. **Effective extracted member:** MAPS02.MIX/sov09t.map. **Trigger definitions:** 16.

This is a translated static ledger, not a recorded playthrough. Trigger numbering below is browsing order, not chronological execution. Each trigger still requires eligibility, enabling, relevant attachments and its event logic. Values called time units remain in the source scale; no unverified wall-clock conversion is applied.

Read an event as applying to the trigger's attached scope when it is object/cell-specific. Multiple event entries are recorded conditions for the trigger, not alternative objectives unless the runtime's event logic makes them so. Tag persistence modes: 0 consumes on the relevant first occurrence; 1 waits for the applicable attached-object completion; 2 permits repeating. Not all definitions have a live attached instance.

sov09t.map - mission overrides and local definitions

Trigger ledger | Team plans | Campaign guide

Each row is explicitly written in this map. It replaces/adds that property for the scenario; properties absent here continue to come from the effective rules/defaults. This table includes matching common-rule/weapon/terrain sections and new registered type definitions, but excludes map-placement data, packed art/terrain blocks and trigger/team sections translated in the companions. It is a property reference, not a claim to have decoded every packed map field. Source: MAPS02.MIX/sov09t.map.

Weapon paths: firing record, projectile and warhead

Guide index | Combat explanation

Every explicit normal, secondary, elite, occupant, numbered-stage and death weapon on the registered object cards is represented. Additional weapon references reached through projectile/warhead effects are followed recursively. A special weapon's damage field must not automatically be interpreted as ordinary health damage.

Each card is read in order: choose weapon; check range/reload; create its effect/projectile; apply its warhead to the target. Percentages use the armor order explained in Combat. Unspecified fields are not invented defaults.

Diagram sources

Eight workflow diagrams explain engine layers, unit decisions, combat, economy, buildings, triggers, AI teams and Android input. Forty-one placement schematics derive from the recovered scenario maps. Owner colors distinguish source owners; they are not an assertion of allies or enemies. Initial placements do not include units later created by triggers.

Sources, verification and limits

Guide index

Prepared from the local game install and port workspace on 26 October 2026. This is a plain-language analysis, not the original source code and not a claim of a completed playthrough of every mission.

Evidence labels

- **Data-confirmed:** present in extracted rules, campaign tables, maps or strings.
- **Binary-supported:** backed by local class/function recovery or inspected lifted procedures.
- **Manual-described:** player-visible behavior described by the supplied English manuals.
- **Conceptual reconstruction:** an explanatory decision sequence consistent with these sources, without a claim that every original instruction/order has been recovered.
- **Unverified in play:** a prediction or branch not exercised in a recorded playthrough.

Extraction and precedence

1. Read the original MIX archive index, decrypting its header where required.
2. Resolve member names with the game-compatible filename hash.
3. Check every member span stays within the declared archive body.
4. Extract the known rules, AI, campaign tables, localization tables and campaign maps.
5. Validate the complete CSF string-table structure and decode its text.
6. Apply the patch archive's rulesmd.ini and all02umd.map in preference to the base members.
7. Keep RA2 and Yuri rules separate.
8. Merge a mission's explicit overrides only for its scenario; missing values are not invented.
9. Translate every recovered event/action record, retaining action order, identifiers and source line locators.

The tools and raw extracted resources remain in the local build-cache/engine-guide-research folder. The reading folder contains derived explanations and factual reference tables, not a new dump of the original rule/map files.

The local recovered class catalogue contains the expected live-object/type, house, cell, trigger, team, factory, projectile and movement-controller responsibilities. The guide does not equate class names with a complete recovery of their algorithms. The Yuri function catalogue and lifted action runner were checked together. The action-runner trace at original address 0x007265C0 checks enabled/destroyed state, walks the action list and invokes the executor at 0x006DD8B0. Those addresses are version-specific evidence locators, not mobile gameplay instructions.

Local source locators: native-ra2/work/rtti.json; native-ra2/work/game/rtti.json; native-ra2/work/functions.json; native-ra2/src/recomp/gen/recomp_0049.c; native-ra2/docs/voxels.md; native-android/PORTING.md; native-android/src/android_entry.c; native-android/app/src/main/java; Native-APK/qa/save-0.1.4/report.md. Relative paths here describe the original workspace and are not required to read the published guide.

Supplied manuals

The accompanying English RA2 manual explains units, structures, garrisons, Engineers, economy, powers and controls. The English Yuri manual explains expansion changes and the added units/structures. They were text-extracted locally for this analysis; the reading guide paraphrases their gameplay explanations and cross-checks explicit rule fields. Manuals can describe intended behavior that differs from a particular patch or scenario.

Local files: Command.&.Conquer.Red.Alert.II/game/Manuals/Red Alert 2 - English 2 - Manual.pdf; Command.&.Conquer.Red.Alert.II/game/Manuals/Yuri_s Revenge - English - Manual.pdf.

Primary technical cross-checks

- YRpp TriggerClass: event state and trigger-action responsibilities.
- YRpp TActionClass: action executor and identified operation entry points.
- YRpp ScriptClass: ordered script state.
- YRpp GeneralDefinitions: event identifiers and object-mission identifiers.
- FinalAlert extension documentation: editor labels for script instruction numbers. Only vanilla instructions used by these maps are described; extension-only features are not assigned to this APK.
- The supplied FinalAlert2/FAData.ini event/action descriptions supply the main translation vocabulary. Its modification date is newer than the retail game, so descriptions are cross-checking aids, not proof that later extension behavior is present.
- Static recompilation project: background for the local runtime and renderer research. Android behavior here is established from the local port, not inferred from desktop feature claims.

What remains open

The guide does not claim exact pathfinder search/tie-breaking, every target-score formula, complete save serialization internals, exhaustive numeric hardcoded defaults, or proof that every declared trigger is reachable. Special editor parameters not independently established remain named configured values. No new complete campaign playthrough, physical Samsung S Pen/OTG qualification, performance measurement or long-session stability trial was performed while writing this guide.

The legacy sov09t.map is documented separately from the campaign-selected sov09u.map. Both tutorial maps are included. Multiplayer/co-op/skirmish maps are not each treated as a new story mission, and multiplayer is disabled in the delivered APK. Global rules/AI still explain their shared mechanisms.

Extracted member fingerprints

These identify the exact local source bytes used. Duplicated maps in multiple archives remain listed so provenance is not lost.
